

## Community Gala & Free Medical Camp Organized by GBScN Batch I.

Good health is key to a fulfilling life, and high-quality health care guarantees well-being for all, especially children and vulnerable groups. Thorough preventive care, prompt diagnosis, and appropriate treatment help save lives and promote healthier communities.

To show their dedication to community health and patient care, GBScN Batch I (4th Year) students successfully put on a two-day Free Medical Camp. The camp gave every patient complimentary medical check-ups, diagnoses, and treatments for many common health concerns. Every patient also received complimentary medical consultations and medications for conditions such as diarrhea, fever, non-communicable diseases (NCDs), and nutritional deficiencies. Fresh fruits as well as nutritional support along with oral rehydration solutions (ORS) were distributed to increase health as well as well-being. As a superb opportunity, students could use their clinical knowledge along with making a truly meaningful effect on the community at the event.

Early diagnosis, proper treatment, and preventive care save lives and promote healthier communities. Nurses provide important support and thorough education that is important to patient care, child health, and overall community well-being. Their dedication to accessible healthcare is clear in this initiative, which will guarantee a healthier future for everyone.
